

Swath Mode Altimetry

Noel Gourmelen

THE UNIVERSITY *of* EDINBURGH

Outline

- 🚢 Background

- 🚢 Impact case studies:

 - 🚢 Topography

 - 🚢 Rates of surface elevation change

Products and applications of radar altimetry over Ice Sheet, Ice Caps, Glaciers:

- Surface elevation
- Scattering mechanism
- Surface roughness
- Digital elevation models
- Rates of surface elevation change
- Ice Sheet mass balance
- Surface Mass Balance
- Ice dynamics (e.g. surges)
- Sub-glacial lakes detection
- Supra-glacial lakes detection
- ...

CryoSat Altimetry

Beam limited footprint

For CryoSat:

$h \sim 730$ km

$\vartheta = 1.08^\circ$ in along-track

$\vartheta = 1.20^\circ$ in across-track

- width in along-track ~ 13.8 km
- width in across-track ~ 15.3 km

$$D = 2h \cdot \tan(\vartheta/2)$$

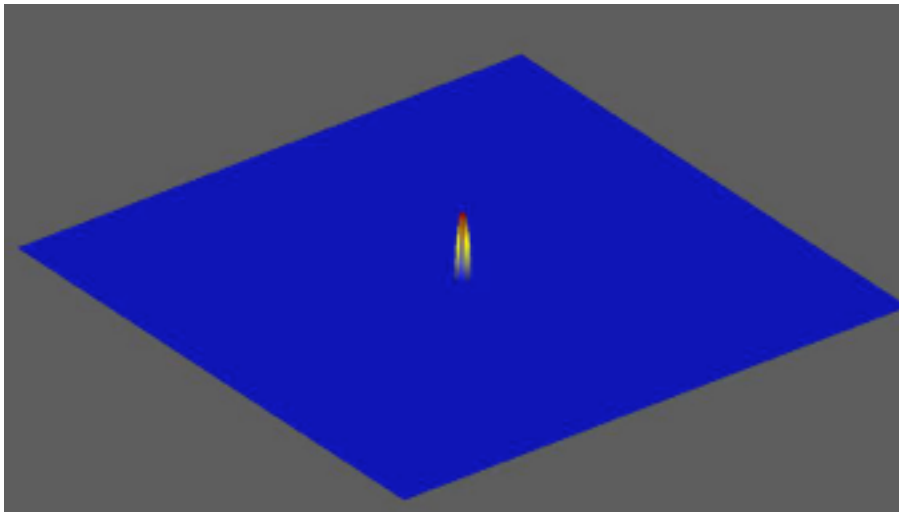

POCA is only a small sample of the data acquired

Pulse-limited footprint

$$r = \sqrt{h \frac{c}{B}}$$

For CryoSat: $2r = 1.65\text{km}$

POCA is only a small sample of the data acquired

CryoSat - Improved spatial resolution

$$\Delta x = h \frac{\lambda}{2 \cdot N \cdot v} PRF$$

POCA is only a small sample of the data acquired

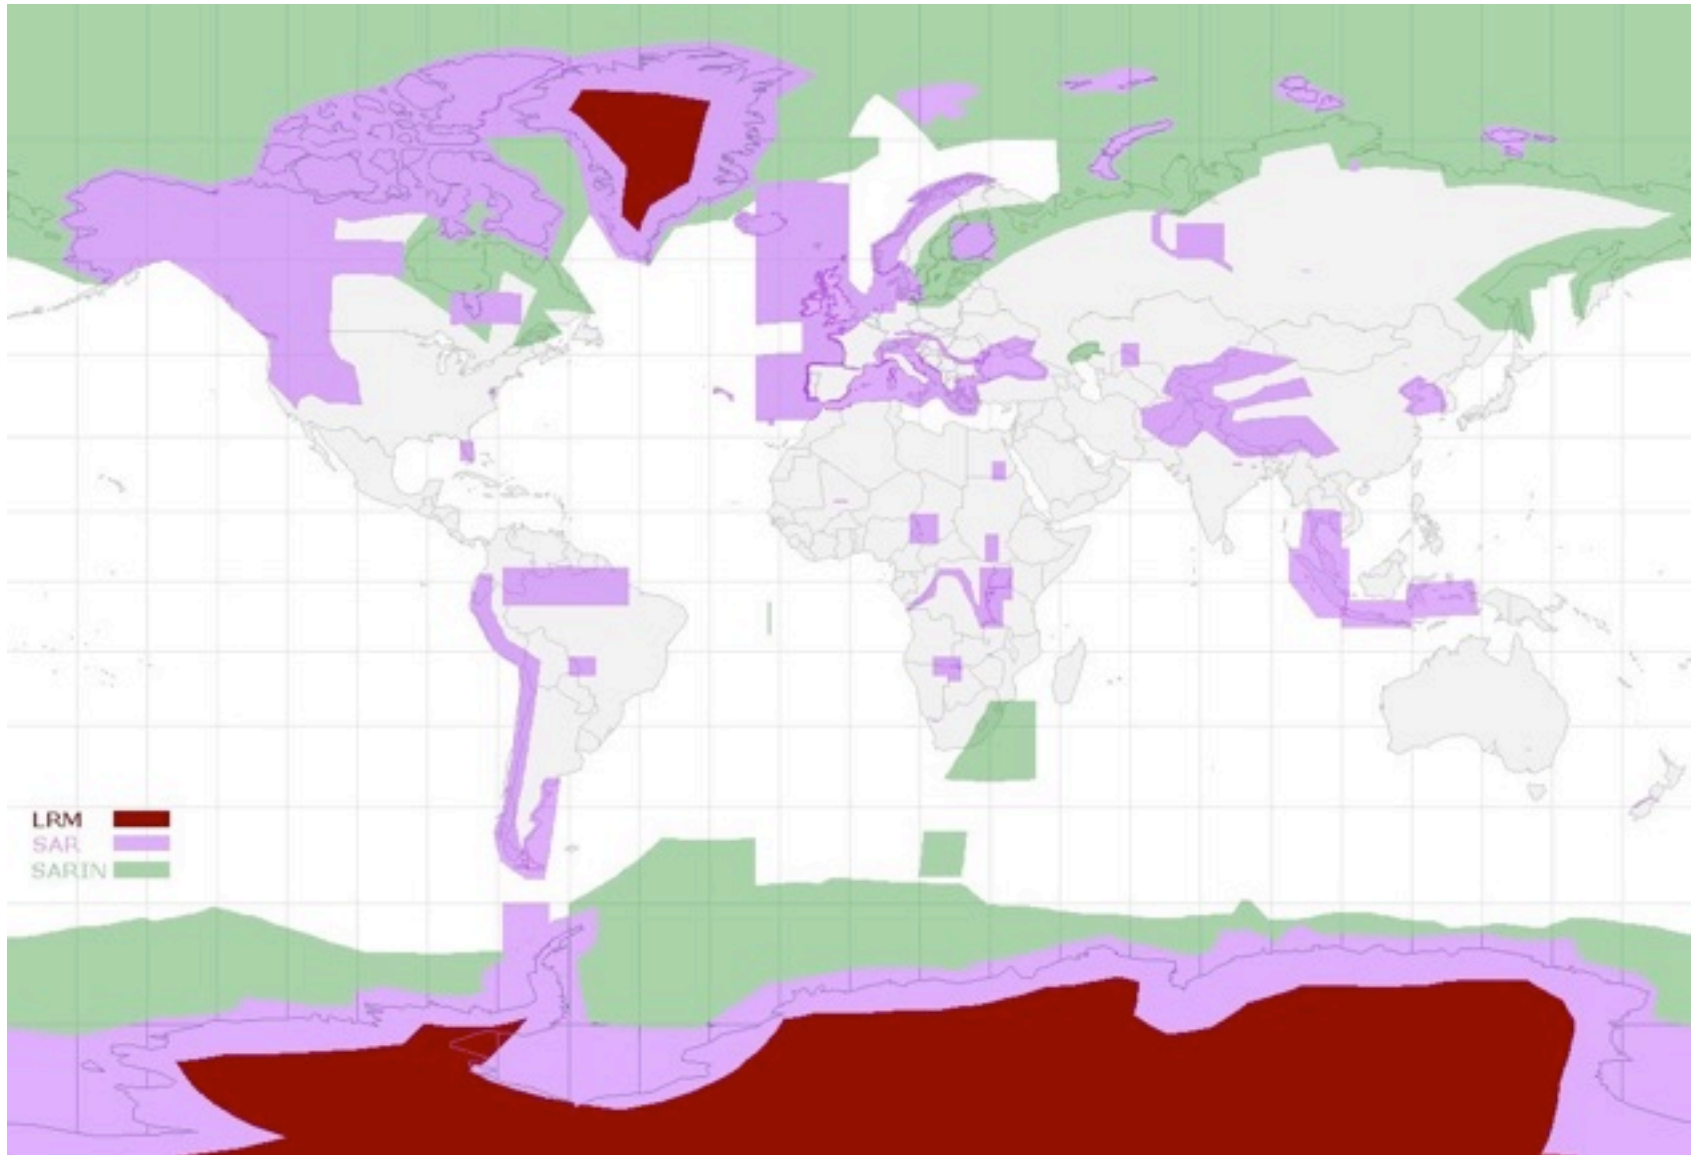

CryoSat - Improved echo localisation

Interferometric mode (SARIn)

CryoSat - Modes mask

Single measurement vs full waveform, POCA elevation vs Swath elevation

Elevation at POCA

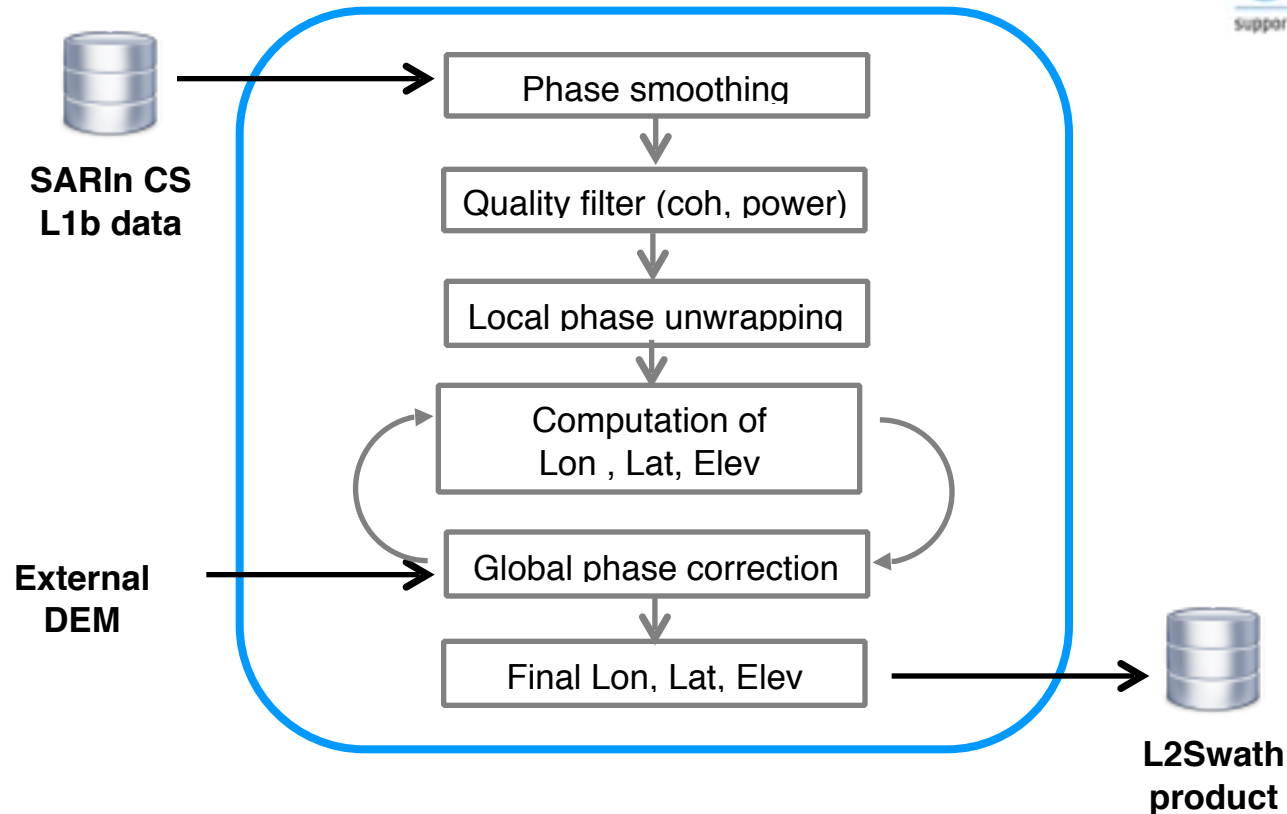

Elevation swath along the across track direction

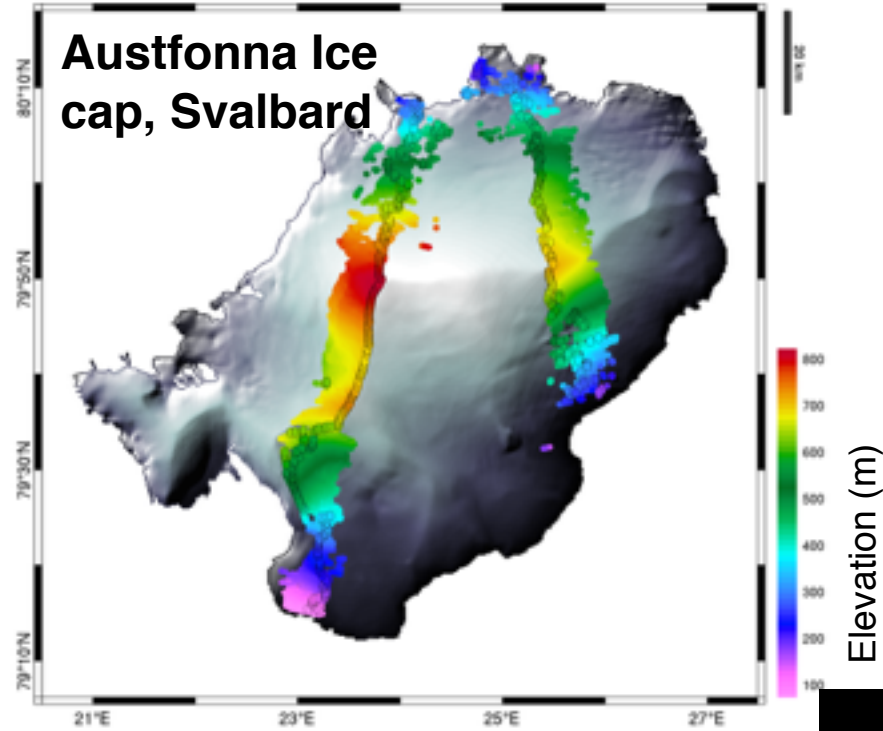

Wingham et al., 2006

Strategy

Austfonna Ice cap, Svalbard

- Swath width of ~5 km
- 1 to 2 orders of magnitude more elevation than POCA

Ground track spacing

Ground tracks

At the equator: ERS: 90 km ; IceSat: 14.5 km
CryoSat: **7.5 km** (~4km at 60° of latitude)

Wingham et al., 2006

Spatial coverage

POCA

Vatnajökul ice cap

Swath

Spatial coverage

Petermann Glacier

Swath allows near continuous spatial coverage

Surface topography

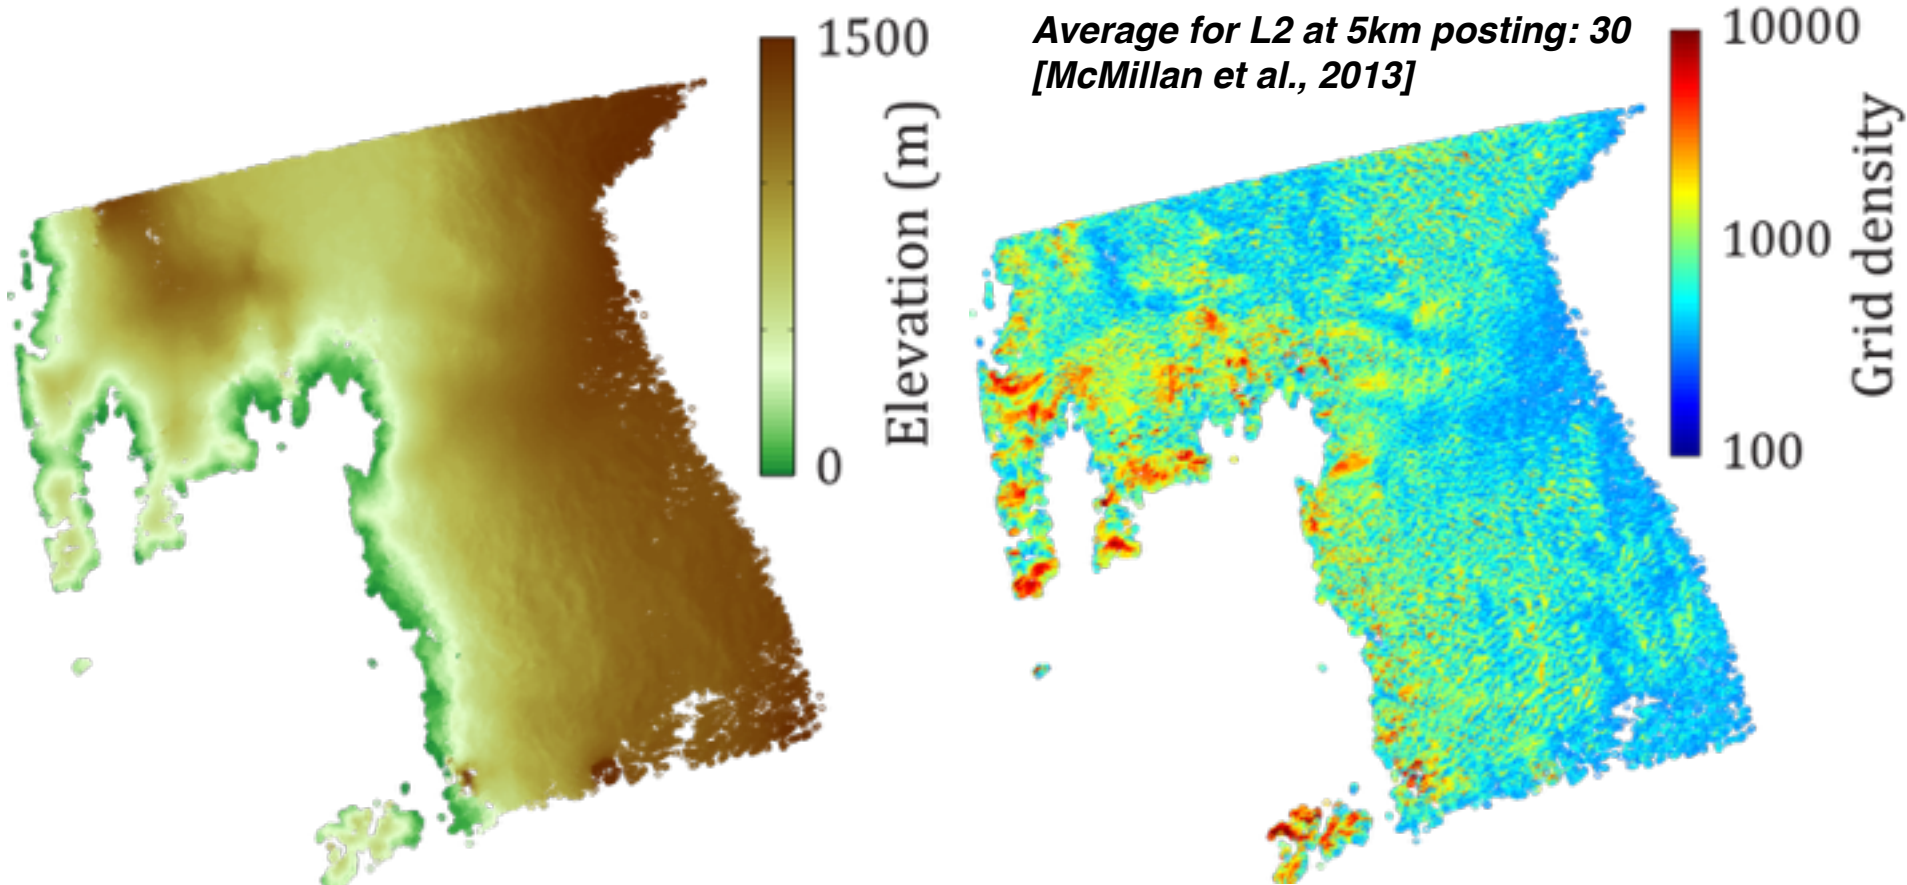

Spatial coverage - Gridded product

Deriving rates of surface elevation change and topography

1. Group data in grid cells

2. Solve a model of the type: $Z(x,y,t)=ax+by+c+dt$, where topography, Z , local terrain slope, (x, y) , and rates of surface elevation change, dt , are conjointly resolved

Amundsen Sea Sector (1 km posting)

High resolution surface topography

Law dome, East Antarctica

High resolution surface topography

Law dome, East Antarctica

Bedmap 2
1 km posting*

Swath
500 m posting

* true resolution is > 7.5 km

High resolution surface topography

Law dome, East Antarctica

Bed topography

Surface topography

High resolution surface topography

Elevation difference with Ice Bridge ATM:

$$-1.2 \pm 2 \text{ m.yr}^{-1}$$

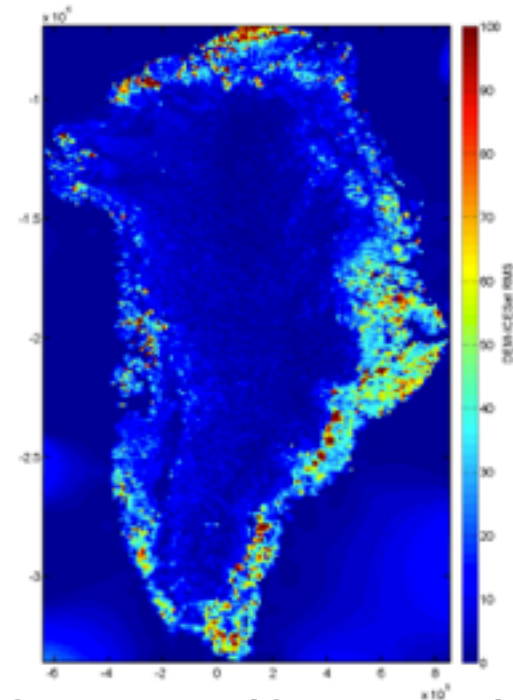

Best currently available DEM products

IceSat DEM (Greenland & Antarctica)

- 1km posting (real resolution ~ 7.5 km on average elsewhere)
- for slopes $< 0.1^\circ$: mean difference is 1 ± 5 m;
- for regions $0.1^\circ < \text{slope} < 1.0^\circ$ slopes, the mean difference is -24 ± 20 m

GIMPDEM (Greenland)

- 30m posting (only on the margins, ~ 7.5 km on average elsewhere)
- RMSE with IceSAT DEM, compared on grid of 10km bin size > 100 m

Measurements accuracy and density

L2swath versus L2 - CryoTop study

<u>Region</u>	<u>L2swath/L2</u> <u>Bias (m)</u>	<u>L2swath/L2</u> <u>Dispersion (m)</u>	<u>L2swath/L2</u> <u>Number of measures</u> <u>(10⁶)</u>	<u>Gain in</u> <u>spatial</u> <u>resolution</u>
Petermann	-1.3/-1.1	1.2/0.8	44.9/1.4	5 folds
Jackobshavn	-1.2/-0.6	2.0/1.4	99.9/1.0	10 folds
Amundsen Sea Sector	-1.7/-1.1	2.0/1.3	199.3/3.3	8 folds

L2 - other studies

<u>Reference</u>		<u>Bias (m)</u>	<u>Dispersion (m)</u>
(L2) ^[RD1]	Greenland (below 2200m)	3.95	133.6
(L2) ^[RD2]	Cook Antarctic lake	-1.5	0.9
CryoVal RR	Jackobshavn	-0.15 to +0.41	2.44 to 2.76
